Project Objectives

The key objectives of the project are focused on addressing the urgent challenges related to health, safety and code compliance associated with existing UNON office blocks A-J.

The scope of works for the project comprises three main components:

- 1. Early works** to repurpose the publishing services building and construction of a new annex (logistics) building, to accommodate all the UNON operational functions.
- 2. Flexible workplace strategies (FWS)** across all offices on the UNON Gigiri complex to improve on current space utilisation.
- 3. New building component**, to replace the old office blocks A-J, and accommodating future space requirements for current UN Gigiri based entities, also addressing the current shortfalls of the existing blocks, namely in terms of universal accessibility, energy efficiency, structural safety, and providing modern and flexible spaces suitable for the implementation of flexible workplace strategies.

Progress made on replacement of Blocks A-J

- 1. Annex (Logistics Building)** - Construction started in April 2021 and was completed in August 2022.
- 2. Renovation of Publishing Services Building** - Construction contract awarded August 2021. First phase complete, second phase scheduled to be complete by December 2022. Refurbished building will provide central location for Security team and Security Control Centre, new IT Primary Data Centre and resized Department of Publishing.
- 3. Flexible Workspace** – Completion of the refurbishment of the full pilot Block V to flexible workspace completed September 2021. Construction of follow up refurbishment works in Blocks P & Q due for completion by Q4 2022.
- 4. New Build Component** – Architectural contract awarded by September 2021. Design to be complete November 2022, tender phases to be concluded February 2023, construction to start by 2023 and scheduled to be completed end 2024.

Sustainability Initiatives

- Target net zero energy consumption
- Achieve highest possible green building rating (e.g. LEED, BREEAM, CASPEE, Green Star)
- Maximize natural/passive air ventilation
- Vastly improve indoor air quality
- Increase access to views and natural light
- Minimize energy consumption through building management controls, and low energy lighting and systems
- Design emphasis on connection to natural environment
- Rainwater and graywater harvesting; reduction of freshwater consumption through low-flow fixtures
- Use of local materials and construction methods
